

Pretoria — Tech Talk #10

Date: 1/20/11

Topic: Fluorescent Systems: Replacement Ballast for BAL-007

Pretoria Transit Interiors has issued this Tech Talk to keep our customers informed on our products.

Pretoria utilized BAL-007 in new bus fluorescent lighting kits from 2003 through 2005. Although we still support BAL-007, we will end the supply of new mounting brackets with replacement ballast. This Tech Talk will describe the technique of removing the ballast from the mounting bracket and installation of the new ballast to the mounting bracket.

Once the ballast assembly has been removed from the light housing:

- Remove the face plate from the rear bracket.
- Remove the ballast from the rear bracket.
- Install the new ballast to the rear bracket making sure that the wires extend through the provided notch. (as shown).
